Egain Edge

The Tampere Student Housing Foundation (TOAS) has more than 6,000 student housing in Tampere, Finland. TOAS provides student housing for students studying post-primary education. The Foundation builds, acquires and maintains a reasonable level of quality and reasonable prices of real estate and housing with necessary additional facilities and services.

Today, Egain's indoor sensors, and energy optimization services are installed in most of TOAS buildings in Tampere. The Co-operation with TOAS began back in 2007.

RESULT

Reduced kWh/m²/year:

26,1 kWh

Energy savings/year:

13,7 %

“For us at TOAS, it is important to be able to obtain concrete information about the temperature / humidity in the apartments, according to Real Estate Manager Jari Ahonen. A particularly useful feature is the self-contained target curve optimization of the Egain service. This has brought clear financial savings, without forgetting the comfort of living.

Egain's service also provides a good tool for collecting temperature and humidity data analysis. Ahonen also appreciates the ongoing cooperation together with his Egain Energy expert. The buildings that are connected to Egain Edge are continuously being analyzed with the help of collected data in order to find areas of improvements and if necessary, changes to the buildings's settings and conditions. “

- JARI AHONEN, BUILDING MANAGER, TOAS
